

Module 2 Assessment Exercise

The assessment you are about to complete will aid you in validating your understanding of the module 2 objectives:

- SELECT, WHERE, and JOIN statements
- ORDER BY and GROUP BY clauses
- INSERT and UPDATE statements
- DAO methods
- Creating domain objects from SQL data

It will also give you practice with coding assessments you may encounter during the job interview process.

Overview

This is a time-boxed, individual coding assessment. You will have one hour to complete as much of your assigned problem as you can. You are not expected to complete all features of problem in the time given. Complete as much as you can.

You may use any resource available in the classroom except another Human Being. This is an individual effort.

Whatever you complete should not have compile or run-time errors. Any features you are able to complete should run successfully.

Any unit tests should also be error free and run successfully.

If you are nearing the end of the time-box and you have compile/run-time errors or tests that have compile errors, consider commenting out or removing the code causing the errors before you push your final effort.

At the end of the time-box you should have your final effort pushed to your class repository.

Instructions

1. Pull from your class repository like you do for code every day. The assessment will be in the module-2 folder of your class repo folder.
2. Your instructor will walk you through the data base setup requirements.
3. Open File Explorer into the [workspace/yourname-java/module-2/00_Assessment-xxxx](#) folder. [xxxx represents the app name](#).
4. You should see two folders, a [part-1](#) and a [part-2](#).
5. Begin with [part-1](#).
6. Use dnVisualizer to out the [solution.sql](#) file with the correct SQL statements to satisfy the requirements.
7. [part-2](#) represents a DAO project that you will finish. Use Eclipse to complete the [DAO](#) class and use the unit tests to check the correctness of the methods.
8. *Exit Eclipse and dbVisualizer before pushing your code to be sure it is saved*
9. Be sure to push your final effort when you are done or at the end of the time-box.
10. Your instructor will let you know when to begin and give you a "10-minute warning" before the end of the time-box.
